

eco-Fleet

What is it?

Many companies still believe that opting for a greener fleet will cost, rather than save, them money. This is no longer the case as a well thought out plan for **improving the environmental performance** of your fleet should also **reduce your fleet costs**.

How will it help your business?

As well as saving you money, a greener fleet can help you win new contracts and retain customers, especially from large companies and public sector bodies who want to work with businesses who can show they are **reducing their carbon footprint**.

Why Neva Consultants?

- Neva Consultants has helped clients **reduce their CO2 emissions**.
- Our Carbon Reduction Programme has significantly helped reduce carbon dioxide emissions.
- Our group average carbon emissions of all vehicles ordered by our clients is 116g/km - **13% lower** than the latest average carbon emission figures for new vehicles ordered in the UK.
- Our group Carbon Reduction Programme has been formally recognised by the **International Organisation for Standardisation** in the form of ISO 14001 accreditation and a coveted Green Organisation **Green Apple Award** for Environmental best Practise.

To illustrate the cost benefits of choosing a vehicle with CO2 emissions below 130g/km, we compared two Nissan Qashqai models. Although the value of the DiG-T Tekna model is £390 more than the dCi Tekna model, **it could cost over £4,000 less** to run over 3 years and could **save the employee over £1,200** in Benefit in Kind (BIK) taxation.

Element	1.6 DiG-T Tekna	1.6 dCi Tekna
Contract term (months)	36	36
Contract mileage	90,000	90,000
Fuel type	Petrol	Diesel
P11d value	£26,065	£26,455
CO2 (g/km)	138	99
Miles Per Gallon	47.1	74.3
Finance rental	£377	£357
Service rental	£88	£85
Total rental*	£465	£442
